

NJ School Performance Report provides data in xlsx format which can be ingested into DB using python after performing required transformations.

The required attributes are specified in Enrollment.xlsx from Google Drive

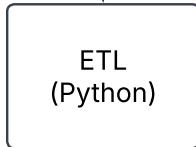

GreatSchools.org provides a paid "NearBySchools School Quality API" which offers nationwide school coverage along with information containing location, rating, etc.

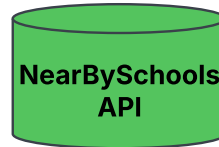

The API costs around \$100/month (has a 14-day free trail to get started with)

NJ DOE

ETL
(Python)

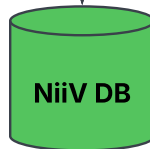

NearBySchools
API

API GET
(Python)

Should create a database for storing the extracted data. Can be MySQL or Oracle which are provided by NJIT

NiiV DB
